

Welcome to Intrinsicica

Intrinsicica is a Hertfordshire-based specialist software development house with a 15-year strong heritage in consultancy, design, build and deployment of IT applications, products and solutions. We solve difficult technical issues whilst closely aligning investments in IT with business needs and commercial benefit.

We have an enviable track record of delivering highly complex solutions on time, to budget and at the very highest level of tested and supported quality for clients as diverse as 3Com, O2-Airwave, BT wholesale, GlaxoSmithKline, DRS Data Services Ltd and Fardux.

Our client engagements have also been diverse; from concept development to commercial delivery of business solutions to providing rapid effective remedies to pressing business needs using the company's reservoir of tools and past project knowledge. This diversity has propelled Intrinsicica to build on our technical excellence by operating a professional and rigorous development process, leveraged with a highly adaptable approach to achieving rapid business improvement.

Intrinsicica's Services

Our services are sufficiently fluid to adapt to the individual requirements of each project. Our services include:

CONSULTANCY

- Concept development and business benefit analysis
- Requirement analysis and product definition
- Software design and product audit
- Design methodology and object-oriented analysis

SOFTWARE SOLUTIONS DEVELOPMENT

- Software design & creation
- Feasibility testing and prototype development
- Iterative & rapid application development capabilities
- Testing and validation

SYSTEM DELIVERY

- Installation
- Integration
- Configuration and customisation
- Operational bedding-in

APPLICATION MANAGEMENT

- Hosting and remote management
- Upgrades, updating and managed application improvements
- Testing, resolution and validation of proprietary applications
- Complete managed service operations

Our technical excellence comes from the complex development of solutions for our clients; below is a brief snapshot showing the variety of our client work;

DRS: Working with DRS Data Services Ltd, Intrinsicca provided help to produce the electronic marking technology that is transforming the way examiners are marking millions of student exam papers.

3Com: One of many projects that Intrinsicca has successfully delivered for 3Com was the comparatively short lifecycle (5 months) project for the development of a network perimeter security system for 3Com which, when used with Microsoft Active Directory and IAS, provides a powerful and dynamic defence against unauthorised user and device access in data infrastructure environments.

02-Airwave: Intrinsicca provided development skills to Airwave to design and implement a web-based workflow process to dynamically manage the project build of the Tetra radio communication network used by UK police forces.

Taylor Hobson: Intrinsicca was engaged to design and develop software that supports their hardware product range, moving away from increasingly outdated MSDOS applications to the latest technologies available.

BAA: The most comprehensive car sharing scheme operating in Britain is powered by pioneering software developed by Intrinsicca.

Met Office: Another large scale adopter of Intrinsicca's Car-sharing programme, the UK's National Meteorological Service routinely use the solution to extensively manage this 'environmentally essential' programme. Real added value was also obtained when the programme was extensively utilised during relocation of the Met Office operations to Devon.
